

Software Project Proposal

Title: Chafity – Connecting for Charity

Description:

Chafity is meant for networking and connecting people in order to make business. Users will define the amount that needs to be donated to their chosen charity fund, when someone wishes to connect with them. Once the contact request is sent, the donation will be booked from one's credit card. When the contact was made and confirmed, the donation will be transferred to the charity's bank account.

Some sample requirements include:

- Users must be able to log on with LinkedIn account
- Users must be able to register their own account. The profiles of the users should be all the same and similar to LinkedIn - e.g. where you work, what is your responsibility, employment history.
- Users will mark their charity organization, who will receive money, if a user is being contacted. Portal shows the most popular charity organizations. Organizations for the MVP will be added manually at first (up to 15). Text box should be available for the user to mark his favorite organization, if it isn't among the top 15.
- User will mark down the amount of money, that will be transferred
- User must have the opportunity to change their preferences and history (edit user profile)
- User will leave a phone number for the portal
- User will receive a short URL address, which he can copy to his LinkedIn account.
- User can contact another user via messaging.
- Before contacting user1, the user2 must enter his need for contacting (messaging) and must leave his credit card number.
- ...

A more complete list of requirements and a Web design will be shared with the students who select this project.
